2022 Coding and Reimbursement Guidelines for the BicepsButton™ Implant and Pec Button

To help answer common coding and reimbursement questions about arthroscopic procedures completed with BicepsButton implant and Pec Button, the following information is shared for educational and strategic planning purposes only. While Arthrex believes this information to be correct, coding and reimbursement decisions by AMA, CMS, and leading payers are subject to change without notice. As a result, providers are encouraged to speak regularly with their payers.

FDA Regulatory Clearance
The Arthrex BicepsButton (K062747, K123341, and K190288), Proximal BicepsButton (K123341), FiberTak Button (K191426), Pec Repair Button (K123341), and Large Pec Button (K123341) are used for fixation of bone to bone or soft tissue to bone, and are intended as fixation posts, a distribution bridge, or for distributing suture tension over areas of ligament or tendon repair in the shoulder and elbow. Procedures include, but are not limited to: pectoralis repair (minor/major), biceps tendon repair and reattachment (distal/proximal), acromioclavicular repair, and ulnar collateral ligament reconstruction.

The Arthrex FiberTak Biceps implant (K181769) is used for fixation of soft tissue to bone in the shoulder and elbow. Procedures include, but are not limited to: biceps tendon repair and reattachment (distal/proximal), acromioclavicular repair, and ulnar or radial collateral ligament reconstruction.

Value Analysis Significance

The Arthrex Pec Buttons have an angled face on each end of the device to promote a toggle effect when the button contacts the opposite cortex. Because of this, the Pec Buttons are ideally suited for repairing ruptures of the pectoralis major tendon back to bone.

Biceps tenodesis using a titanium BicepsButton implant or an all-suture FiberTak Button and the tension-slide technique allows the surgeon to reliably tension and repair the long head of the biceps using either a bicortical or unicortical repair.

The Arthrex FiberTak Biceps implant delivers an all-suture anchor optimized for use in open tissue-fixation procedures, particularly subpectoral biceps tenodesis.

Coding Considerations

The primary endoscopic/arthroscopic procedure determined by the surgeon may include:

<table>
<thead>
<tr>
<th>CPT® Code</th>
<th>Code Description</th>
<th>Physician²</th>
<th>Hospital Outpatient³</th>
<th>ASC⁴</th>
</tr>
</thead>
<tbody>
<tr>
<td>23430</td>
<td>Tenodesis of long tendon of biceps</td>
<td>$638.48</td>
<td>N/A</td>
<td>5114 - Level 4 Musculoskeletal (MSK) Procedures</td>
</tr>
<tr>
<td>24341</td>
<td>Repair, tendon or muscle, upper arm or elbow, each tendon or muscle, primary or secondary (excludes rotator cuff)</td>
<td>$766.53</td>
<td>N/A</td>
<td>5114 - Level 4 MSK Procedures</td>
</tr>
</tbody>
</table>

HCPCS Code | Code Description | Notes
---|---|---
C1713 | Anchor/screw for opposing bone-to-bone or soft tissue-to-bone (implantable) | For Medicare, anchors/screws/joint devices are not separately reimbursed in any setting of care (eg, hospital, ASC, office). These costs are absorbed by the facility via the appropriate reimbursement mechanism (eg, MS-DRG, APC, etc).

Anchor for opposing bone-to-bone or soft tissue-to-bone (C1713) – Implantable pins and/or screws that are used to oppose soft tissue-to-bone, tendon-to-bone, or bone-to-bone. Screws oppose tissues via drilling as follows: soft tissue-to-bone, tendon-to-bone, or bone-to-bone fixation. Pins are inserted or drilled into bone, principally with the intent to facilitate stabilization or oppose bone-to-bone. This may include orthopedic plates with accompanying washers and nuts. This category also applies to synthetic bone substitutes that may be used to fill bony void or gaps (ie, bone substitute implanted into a bony defect created from trauma or surgery).

(List of Pass Through Payment Device Category Codes – Updated January 2020 [https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/Comple-list_DeviceCats-OPPS.pdf](https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/Comple-list_DeviceCats-OPPS.pdf))

For non-Medicare (eg, commercial) patients, depending on contractual terms and general stipulations of the payer, direct invoicing may be allowed. Contact the patient’s insurance company or refer to the facility’s payer contract for more information.

For more information about the primary procedure, please speak with your admitting surgeon. You may also call Arthrex’s Coding Helpline at 1-844-604-6359 or e-mail us at arthrex@cmcopilot.com.

This content is not intended to instruct medical providers on how to use or bill for health care procedures, including new technologies outside of Medicare national guidelines. A determination of medical necessity is a prerequisite that we assume will have been made prior to assigning codes or requesting payments. Medical providers should consult with appropriate payers, including Medicare fiscal intermediaries and carriers, for specific information on proper coding, billing, and payment levels for health care procedures.
