Patient Outreach and Education Resources

Welcome

Arthrex is pleased to provide this AnkleSprain.com resource kit that includes all the tools you need to educate your patients about chronic ankle instability and the *InternalBrace*™ procedure as a treatment option.

Thank you for investing in Arthrex's *InternalBrace* ligament augmentation system and making it part of your practice. Your utilization of the *InternalBrace* surgical technique demonstrates your commitment to providing your patients with a minimally invasive experience using innovative technology to help them get back to doing what they love faster¹ and feeling stronger.²

To help you educate your patients about the *InternalBrace* procedure, we have compiled this educational Resource Kit, in which you will find the following:

- News release templates you can easily format to fit your needs.
- An *InternalBrace* ligament augmentation fact sheet that provides a quick overview of the procedure and how it helps patients recover.
- Highlights of the AnkleSprain.com website that you can share with patients to help them understand chronic ankle instability and the *InternalBrace* ligament augmentation procedure.
- Templated social media posts to help you share this innovative technology through your social channels.
- An informational brochure about the procedure that can be shared with patients.
- Digital banners and high-resolution photos for your practice's website that highlight *InternalBrace* technology.
- Access to videos of patients talking about how *InternalBrace* ligament augmentation helped them return to activity.

We hope you find these tools useful as you implement *InternalBrace* ligament augmentation repair for your ankle instability procedures. If you need more information or resources to help you promote this technology, please contact InternalBrace@arthrex.com or (800) 933-7001.

The *InternalBrace* surgical technique is intended only to augment the primary repair/reconstruction by expanding the area of tissue approximation during the healing period and is not intended as a replacement for the native ligament. The *InternalBrace* technique is for use during soft tissue-to-bone fixation procedures and is not cleared for bone-to-bone fixation.

Overview

InternalBrace™ Ligament Augmentation System

FACTS

- Ankle sprains are the most common sports injury, with an estimated 2+ million occurring in the United States annually.³
- One in 5 people who have a lateral ankle sprain report having long-term ankle problems.⁴ The rate is 1 in 3 for athletic populations.⁵
- Up to 70% of people who have sprained their ankle will suffer another sprain in the future.^{6,7}
- Over time, repeated injury to the anterior talofibular ligament (ATFL) can lead to degenerative changes and the development of osteoarthritis.

FEATURES

- If conservative treatments fail to relieve chronic ankle pain and/or sprains, surgical intervention with *InternalBrace* ligament augmentation should be considered. The surgical repair can restore function and help protect the ligament from reinjury during the healing period.^{1,2}
- The procedure allows for immediate range of motion,¹ which promotes healthy ligament healing.
- The procedure allows for faster recovery,¹ which helps patients return to the activities they love sooner.

APPLICATION

- The *InternalBrace* technique can be used to augment a Broström procedure for lateral or medial ankle instability.

AnkleSprain.com Fact Sheet

AnkleSprain.com is an innovative educational experience designed to help your patients understand chronic ankle instability and their treatment options. This is the first patient-focused website dedicated to chronic ankle instability awareness and includes several immersive features to help enhance a patient's knowledge, including:

- Key informational points about chronic ankle instability and sprains
- Standard exam steps physicians use to diagnose chronic ankle instability
- Detailed explanations and data for different treatment options, including conservative treatments and surgery
- Comprehensive talking points and frequently asked questions about the *InternalBrace* ligament augmentation procedure and how it works
- Videos of patients discussing how the *InternalBrace* ligament augmentation procedure helped them get back to doing what they love
- Educational animations and graphics that illustrate how *InternalBrace* ligament augmentation works to protect and speed recovery from reconstructive surgery
- Video FAQs with leading ankle surgeons discussing chronic ankle instability and the *InternalBrace* procedure
- A "Find a Doctor" feature that allows patients in your area to engage with you and your practice about treatment for chronic ankle instability including with the *InternalBrace* ligament augmentation procedure

Doctor or Health System

[DOCTOR or HEALTH SYSTEM] Invests in Innovative Technology to Get Patients with Chronic Ankle Sprains Back on Their Feet

CITY, STATE – DATE – [Doctor or Health System name] has invested in an innovative technology to help patients with chronic ankle sprains get back on their feet faster¹ and feeling stronger.²

[Doctor or Health System Name] is using the *InternalBrace*™ ligament augmentation system. The simple, safe and reproducible technique uses a BioComposite SwiveLock® anchor and FiberTape® suture that supports the ankle and helps prevent the possibility of a secondary injury,¹ similar to wearing a [seat belt](#) for support.

EXAMPLE QUOTE PROVIDED BELOW:

“I’m/We’re excited to use this technology because it allows my patients to get back to activity faster,” said XX. “This is a common injury that affects millions³ of people each year. I am/We are happy to be able to offer treatment that could protect them from reinjury and can help with recovery.”

Ankle sprains are the most common sports injury, with an estimated 2+ million occurring in the United States annually.³ One in 5 people who have a lateral ankle sprain report having long-term ankle problems.⁴ The rate is 1 in 3 for athletic populations.⁵

Patients who meet the criteria for the use of this technology often suffer repeated ankle sprains, which limits their ability to participate in the activities they love.

EXAMPLE QUOTE PROVIDED BELOW:

“[Doctor or Health System Name] is committed to delivering the most advanced care to patients to help improve their experience and outcomes, returning them to the activities they love faster,” said XX. “This technology allows us to continue to treat our patients better.”

For media inquiries, please contact [name, title, phone, email].

This handout is provided as an educational tool and clinical aid to assist properly licensed medical professionals in the usage of specific Arthrex products. As part of this professional usage, the medical professional must use their professional judgment in making any final determinations in product usage and technique. In doing so, the medical professional should rely on their own training and experience and should conduct a thorough review of pertinent medical literature and the product's directions for use. Postoperative management is patient-specific and dependent on the treating professional's assessment. Individual results will vary and not all patients will experience the same postoperative activity level or outcomes. Products may not be available in all markets because product availability is subject to the regulatory or medical practices in individual markets. Please contact your Arthrex representative if you have questions about availability of products in your area.
